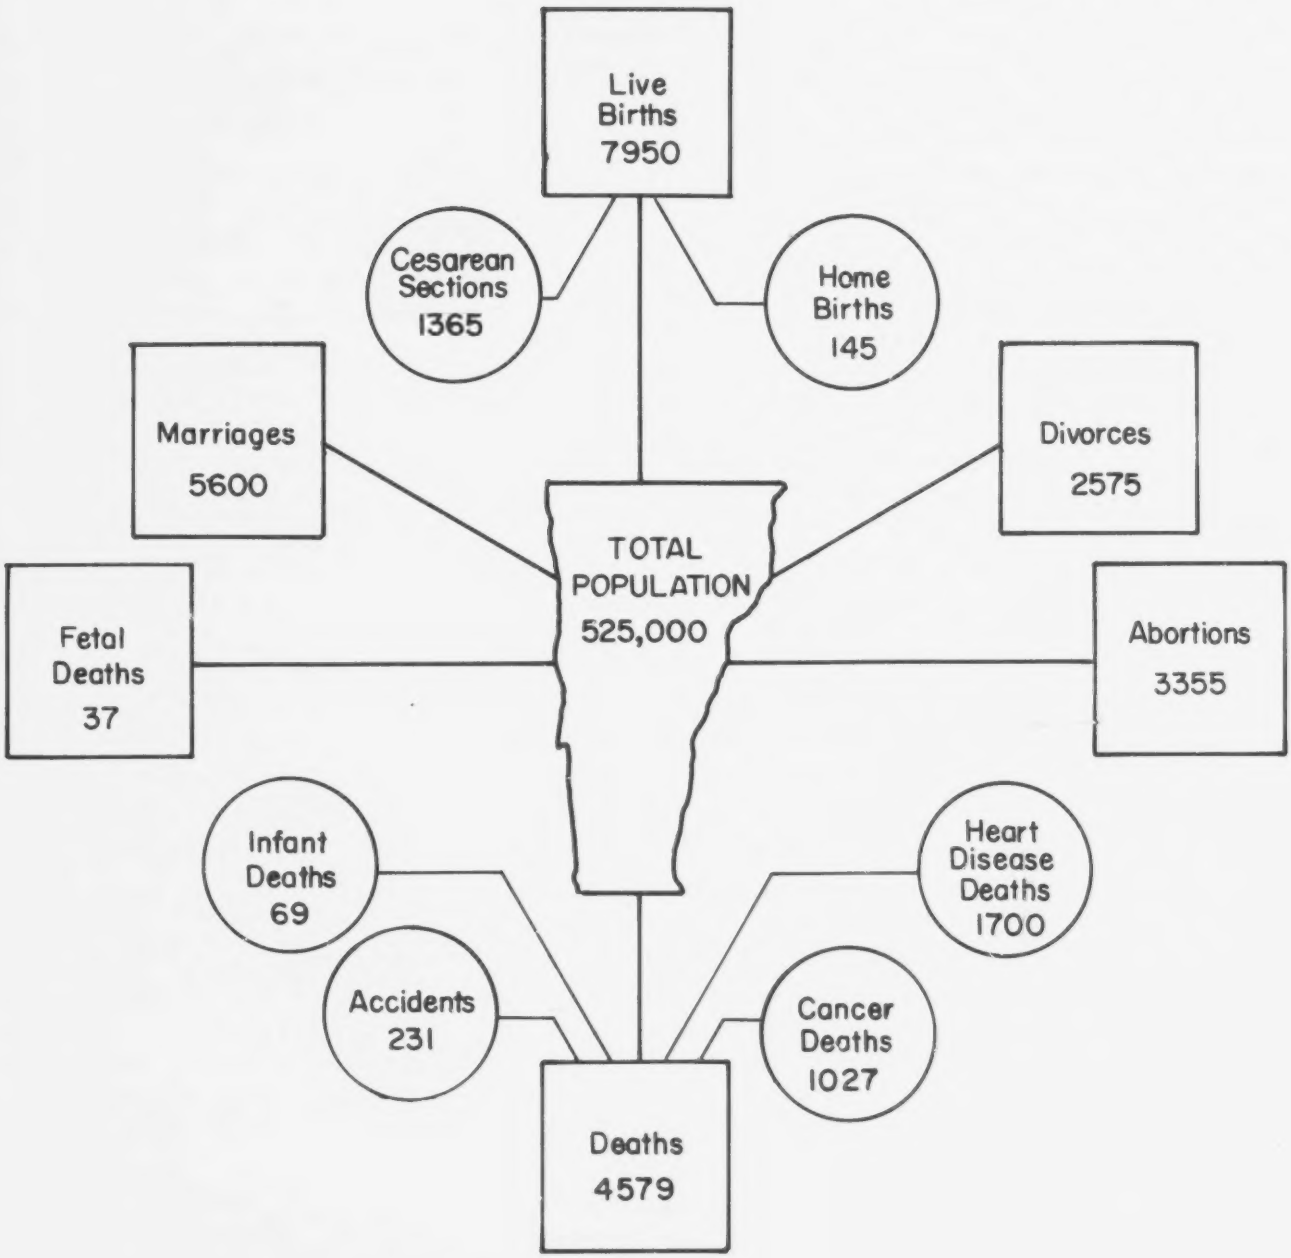
VERMONT VITAL EVENTS FOR 1983



Marriages, divorces, and abortions displayed above are occurrence data; all other vital events represent resident data.

INTRODUCTION

Title 18, Section 5002 of the Vermont Statutes Annotated requires periodic publication of tables from the returns of births, deaths, fetal deaths, marriages and divorces. This report, which is the ninety-ninth in a series of publications begun in 1857, presents Vermont vital events for the year 1983.

THE VERMONT VITAL STATISTICS SYSTEM

Under Vermont statute, the Department of Health is responsible for operating the statewide system of Vital Statistics. Figure 2A presents an overview of this system. Birth and death certificates in Vermont are filled out by the attending physician and are filed with the clerk in the town of occurrence. Marriage certificates are filled out by the person solemnizing the marriage and are filed with the clerk who issued the marriage license (the town of residence of either the bride or groom, or if neither is a Vermont resident, a town clerk in the county where the marriage takes place). Divorce certificates are filled out by the plaintiff's attorney and are filed with the county clerk in the county in which the decree is granted. Copies of these certificates are forwarded to the Health Department monthly for statistical processing and permanent storage.

Reports of fetal death and induced termination of pregnancy are not legal documents in Vermont. These records are filled out by the attendant at the event and are sent directly to the Health Department. After processing, the reports are temporarily filed and are periodically destroyed.

Copies of certificates pertaining to events which occur to Vermonters outside the state are sent to the Health Department by the state in which the event occurred under the interstate exchange program for vital records. This program includes events affecting armed forces personnel stationed overseas. The Health Department is not typically informed of events occurring to the civilian population while out of the territorial United States and Canada.

Figure 2B portrays vital statistics information processing within the Department of Health. Upon receipt at the Health Department, the certificates are logged in by town, visually edited for completeness and internal consistencies and queried if omissions or inconsistencies are found. Since, under Vermont law, a certificate cannot be amended in the Health Department, if necessary, the appropriate person will be asked to file an amended certificate. Medical and demographic data is coded and the certificate is numbered and microfilmed. Infant deaths are matched with the corresponding birth certificate. Certificates are then passed from the vital records section to data processing.

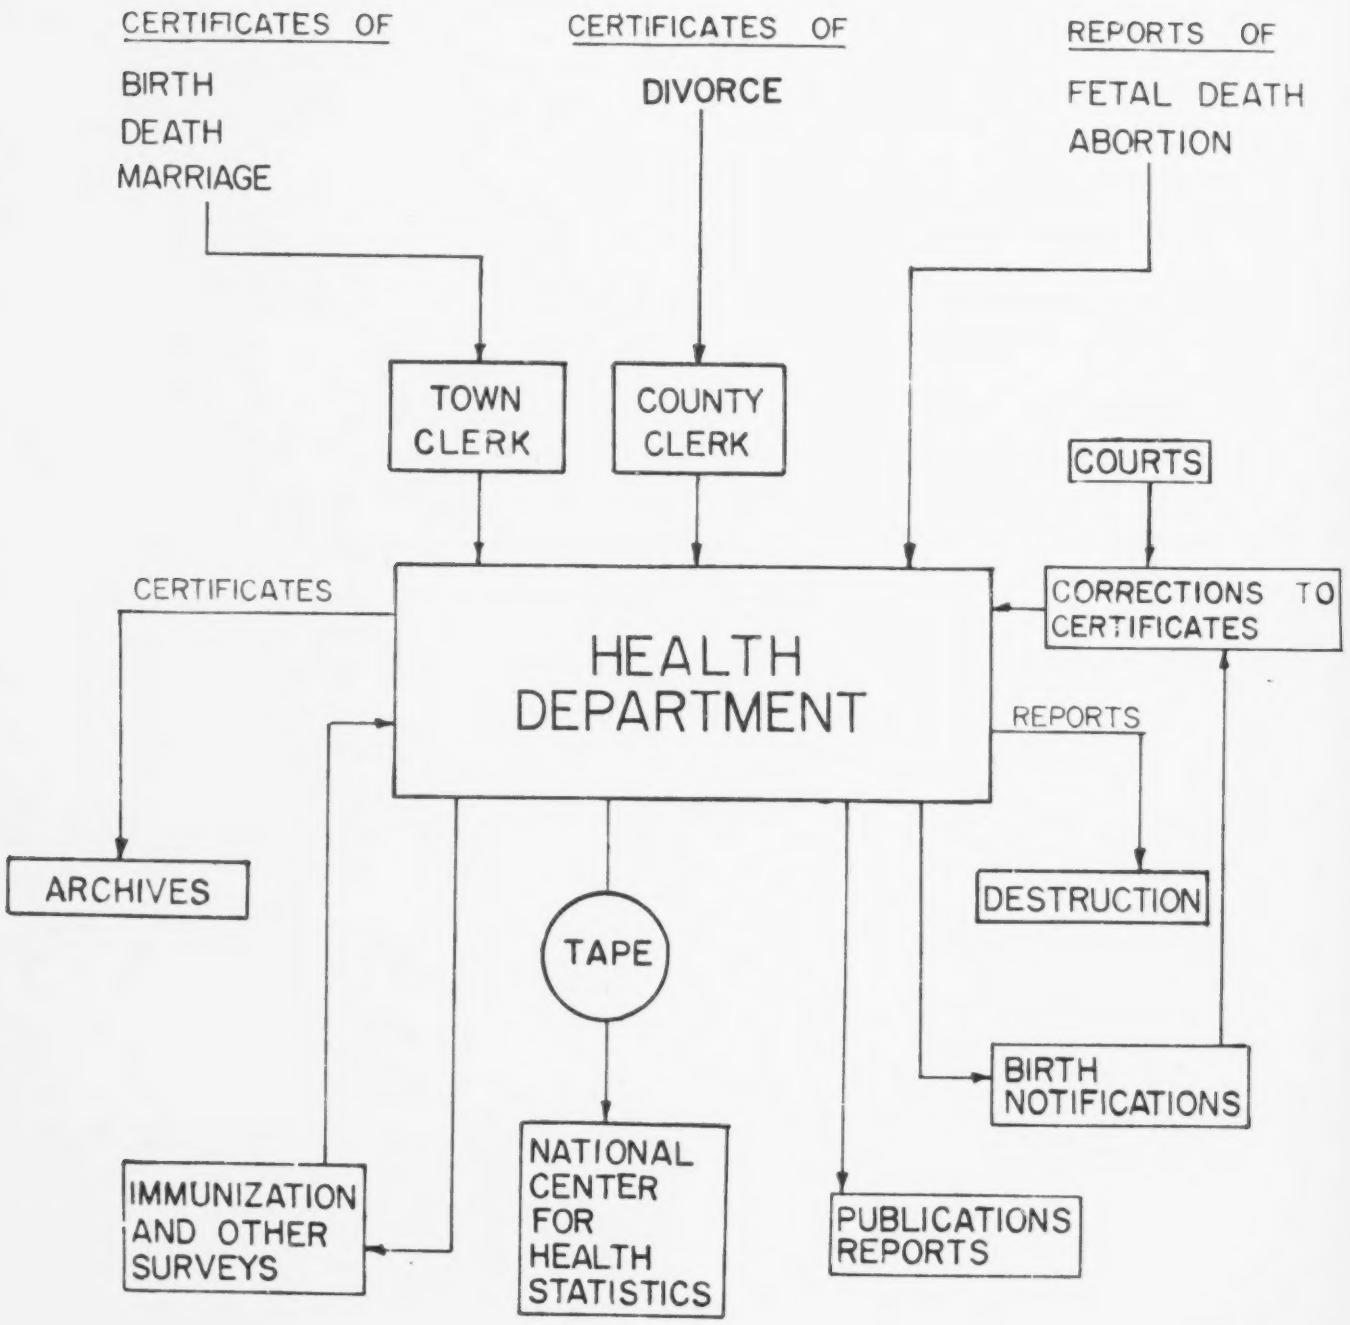
After the certificates are keyed and verified, the month's vital events, including the matched births and deaths, are loaded into the computer. The records are then subjected to a computerized edit which checks all fields for valid codes and inconsistencies as well as flagging suspiciously large or small values and certain improbable conditions, such as unusual age-sex-cause of death combinations. Any discrepancies are reconciled and the records are added to the master file. A copy of the month's records is transmitted to the National Center for Health Statistics for inclusion in the national health data base. When the data is complete, annual tabulations, including those in this bulletin are produced.

POPULATION

All rates in this publication are based on estimates of the Vermont midyear 1983 population (Table 2) developed by the Division of Public Health Statistics. They are published in the Public Health Statistics Bulletin, August, 1984.

figure 2

THE VERMONT VITAL STATISTICS SYSTEM



Basic Definitions

The following definitions apply throughout this report:

A LIVE BIRTH is the complete expulsion or extraction from its mother of product of conception, irrespective of the duration of pregnancy, which after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

A DEATH is the permanent disappearance of any evidence of life at any time after live birth.

A MARRIAGE is the legal union of persons of opposite sex.

A DIVORCE is the final legal dissolution of a marriage.

An ANNULMENT is the invalidation or voiding of a marriage which confers on the parties the status of never having been married to each other.

A reportable FETAL DEATH is a death prior to the complete expulsion or extraction from its mother of a product of conception, having passed through at least the 20th week of gestation or weighing more than 400 grams; the fetus shows no signs of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

An ABORTION is the purposeful interruption of pregnancy with the intention other than to produce a live-born infant or to remove a dead fetus.

A NEONATAL DEATH is a death occurring in the first 28 days of life.

An INFANT DEATH is a death occurring in the first year of life.

A PERINATAL DEATH is a fetal death or a death occurring in the first week of life.

A MATERNAL DEATH is the death of a woman from causes related to pregnancy.

WEEKS OF GESTATION is the number of weeks elapsed between the first day of the last menstrual period and the date of delivery.

PLURALITY is the number of siblings born as a result of this pregnancy.

RESIDENCE Usual place of residence for person to whom event occurred. For births and fetal deaths residence is defined as the mother's usual place of residence.

OCCURRENCE Place where the event actually occurred.

RATES

Crude Birth Rate = $\frac{\text{No. of resident live births}}{\text{Total resident population (mid-year)}} \times 1000$

Fertility Rate = $\frac{\text{No. of resident live births}}{\text{Total resident female population (15-44)}} \times 1000$

Age-specific Fertility Rate = $\frac{\text{No. of resident live births to mothers in a specific age group}}{\text{Total female population in specific age group (mid-year)}} \times 1000$

Crude Death Rate = $\frac{\text{No. of resident deaths}}{\text{Total resident population (mid-year)}} \times 1000$

Age-specific Death Rate = $\frac{\text{No. of deaths in specific age group}}{\text{Total resident population in specific age group}} \times 1000$

Marriage Rate = $\frac{\text{No. of marriages}}{\text{Total resident population (mid-year)}} \times 1000$

Divorce Rate = $\frac{\text{No. of divorces and annulments}}{\text{Total resident population (mid-year)}} \times 1000$

Infant Death Rate = $\frac{\text{No. of resident infant deaths}}{\text{Total resident live births}} \times 1000$

Neonatal Death Rate = $\frac{\text{No. of resident neonatal deaths}}{\text{Total resident live births}} \times 1000$

Fetal Death Rate = $\frac{\text{No. of resident fetal deaths}}{\text{Total resident live births and resident fetal deaths}} \times 1000$

Perinatal Death Rate = $\frac{\text{No. of resident perinatal deaths}}{\text{Total resident live births and resident fetal deaths}} \times 1000$

Abortion Ratio = $\frac{\text{No. of resident abortions}}{\text{Total resident live births}} \times 1000$

Age adjusted rates:

Age adjusting allows one to compare rates among populations having different age distributions by adjusting the crude rates in each population to a standard population base. (In this bulletin, county rates are adjusted to the state population distribution). The computation formula is:

$$\text{The sum of } \frac{\text{Age specific rate for each age group} \times \text{Standard population in that age group}}{\text{Total standard population}} \times 1000$$

SUMMARY STATISTICS

SUMMARY OF 1983 VITAL EVENTS

	Occurrence Number	Residence Number	Residence Rate
Births	7,741	7,950	15.1/1000 Population
Deaths	4,684	4,579	8.7/1000 Population
Natural Increase		3,371	6.4/1000 Population
Infant Deaths	61	69	8.7/1000 Population
Fetal Deaths	49	37	4.6/1000 Population
Abortions	3,355	2,433*	
Marriages	5,600		10.7/1000 Population**
Divorces	2,620		4.9/1000 Population**

Estimated midyear population: 525,000

*Does not include out of state occurrences
**Based on number of occurrences

SUMMARY STATISTICS

In 1983, several of the major vital statistics rates remained essentially unchanged from the values observed in 1982. The rates of deaths, marriages, and divorces were stable over the two year period. The infant death rate of 8.7 deaths per 1000 live births continues the fluctuations of recent years.

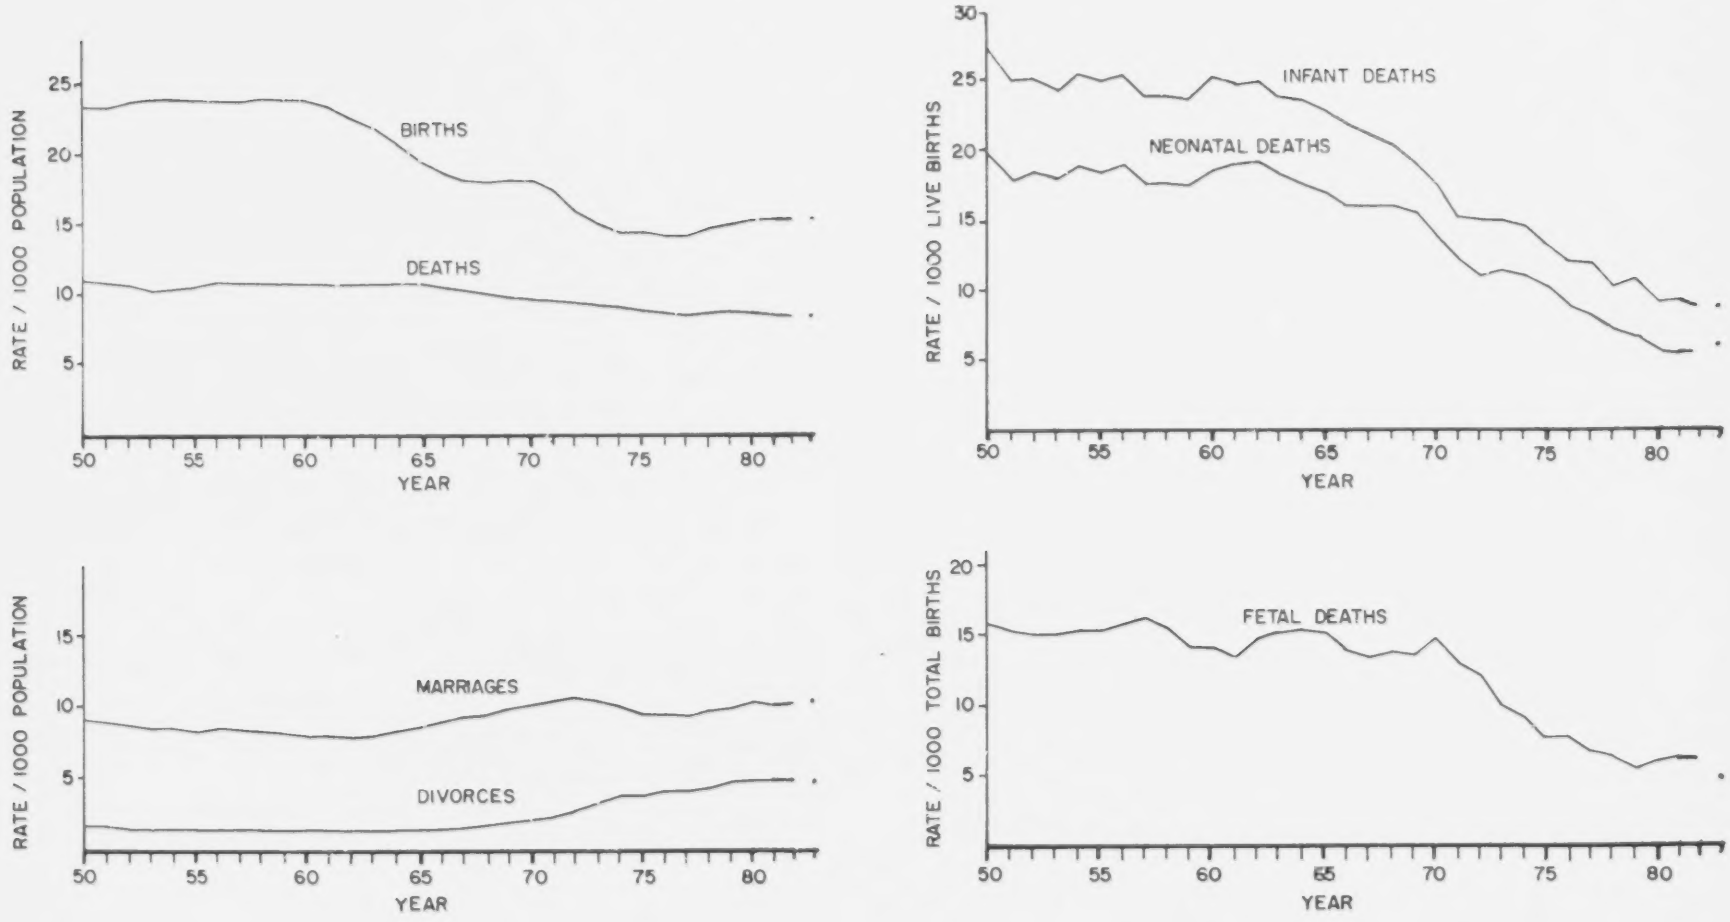
The 1983 birth rate of 15.1 births per 1000 population represents a two percent decline in this rate. This is the lowest observed birth rate since 1978. In addition, the total number of births declined between 1982 and 1983, the first such decline since 1971. The abortion ratio also declined to 306.1 abortions per 1000 live births, down from 322.5 in 1982. This is the first significant decline in the abortion ratio since 1977.

The 1983 Vermont population is estimated to be 525,000 persons, 269,603 females and 255,397 males. The most numerous age groups include those of college age (15-19 and 20-24 years), as well as the baby boom generation (25-29 and 30-34 years).

Figure 3

SELECTED VITAL EVENT RATES, VERMONT, 1950 - 1983

THREE YEAR MOVING AVERAGES*



* THE MOVING AVERAGE FOR A GIVEN YEAR IS THE AVERAGE OF THE DATA FOR THAT YEAR AND THE 2 ADJACENT YEARS. NO AVERAGE IS CALCULATED FOR END YEARS. THIS TECHNIQUE ATTENUATES RANDOM VARIATION.

[1]Population is the census population for those years when the census was taken and is mid-year estimates for non-census years.

[2]Rate per 1000 population.

[3]Rate per 1000 women aged 15-44.

[4]Number of pregnancies includes Live Births and Fetal Deaths for 1857-1972, and Live Births, Fetal Deaths and Abortions for 1973-present.

[5]Rate per 1000 live births.

[6]Rate per 1000 live births and fetal deaths.

*Data for these years is based on occurrence returns only.

**1857 population is the 1860 census population.

#1857 was the first year that town clerks were required to report vital events to the Secretary of State and returns for that year are incomplete.

&Population figures and rates for these years have been changed from older publications of this table to correspond to the census figures and revised mid-year estimates.

##Reporting requirements were changed and includes only those of 20 or more weeks gestation or weighing 400 or more grams.

BIRTHS

In 1983, 7950 babies were born to Vermont women, a decrease of 78 from the 1982 figure. This is the first drop in the number of births since 1971. The 1983 birth rate of 15.1 births per 1000 population represents a 2 percent decline from the 1982 level of 15.4. The fertility rate of 61.8 births per 1000 women aged 15-44 remains stable. Decreases in fertility were observed among women aged 20-24 and 25-29, while fertility increased for women aged 30-34. Fertility rates for teenagers and women over 34 did not change over the two year period.

Overall, just under two thirds of all mothers were in their twenties and 11 percent were teenagers. Fourteen percent had not completed high school while 21 percent were college graduates. Both age and education had a significant influence on the amount of prenatal care received. Over 80 percent of mothers with at least a high school education had begun prenatal care by the beginning of the second trimester of pregnancy compared to 65 percent of those without a high school diploma. The percentage of mothers receiving prenatal care in the first trimester increased with age except for women over age 40 who were less likely to seek prenatal care early than were women in their twenties and thirties.

Slightly less than six (5.9) percent of babies born in 1983 weighed under 2500 grams. The percentage was higher for babies of teenaged mothers (7.6 percent) and mothers over age 40 (8.2 percent).

As in previous years, most births occurred in hospitals and were delivered by physicians. Approximately 2 percent of births occurred at home, with two thirds of home births being attended by a lay midwife. Five percent of hospital births were attended by certified nurse midwives.

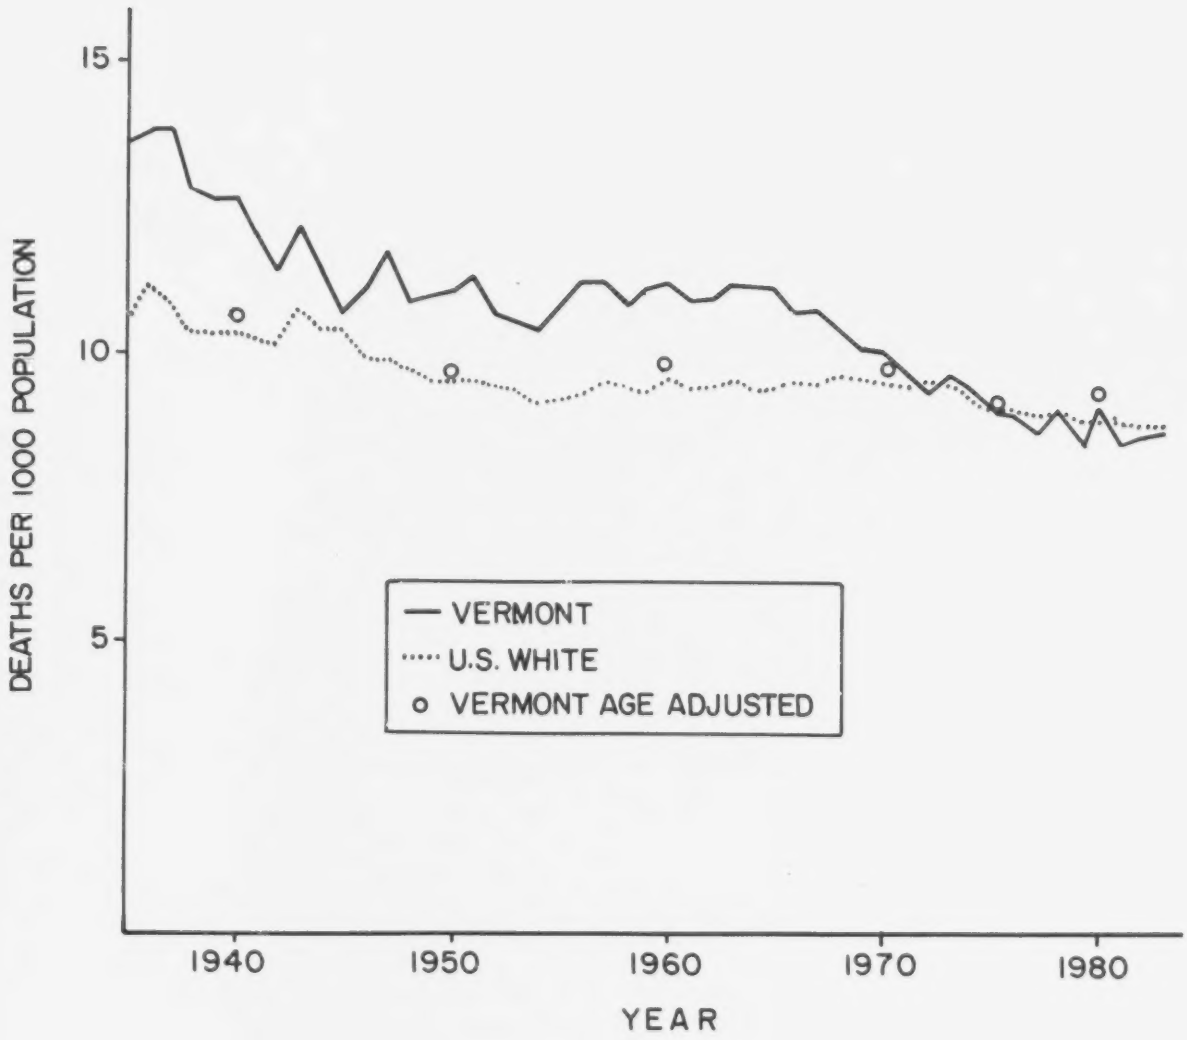
DEATHS

Figure 6

VERMONT AND U.S. WHITE CRUDE DEATH RATES, 1935-1983



U.S. RATES FOR 1982 AND 1983 ARE ESTIMATES

DEATHS

The 4579 deaths to Vermont residents in 1983 yielded a crude death rate of 8.7 deaths per 1000 population, a minor increase over the 1982 rate of 8.6. This is comparable to mortality rates experienced by Vermonters in recent years and to the provisional 1983 rate for the United States white population (8.8).

Overall, mortality rates due to the ten leading causes of death in Vermont were similar to those of recent years. Heart disease accounted for 37 percent of all resident deaths, malignant neoplasms for 22 percent, and cerebrovascular disease (stroke) for an additional 7 percent.

This year, for the second time, we have presented two tables that display information on multiple causes of death noted on the death certificate. Table 39 shows the number of deaths for which a condition is mentioned, in concert with the number of deaths for which that condition is the underlying cause. Causes frequently listed on the certificate as other than the underlying cause include septicemia, chronic ischemic heart disease, atherosclerosis, chronic obstructive pulmonary disease, nephritis, and renal failure.

Table 40 displays a cross tabulation of nature of injury for deaths with mention of an external cause. Most of the injuries associated with motor vehicle accident deaths are intercranial injuries, internal injuries, fractures, and traumatic complications. Non-motor vehicle accidents were associated with those injuries mentioned above as well as choking on a foreign body, burns, and the toxic effects of carbon monoxide and other fumes. Suicides and homocides were primarily associated with open wounds and head injuries.

*In the past, Vermont mortality statistics have been based on a count of deaths with one cause assigned to each death. This "underlying cause of death" is the disease or injury which initiated the train of events leading directly or indirectly to death. The Vermont Death Certificate provides room for the Certifier to list all conditions, diseases and injuries present at the time of death. Multiple cause analysis allows us to take note of these other conditions.

7th: 581 (1.055)	F	17	6.3	8.3	7.6	4.8	7.7	6.6

*Cause of death is coded by the International Classification of Diseases, Adapted (ICDA). Deaths in 1952-57 were coded according to the 6th ICDA revision (ICDA-6), 1958-67 deaths according to ICDA-7, 1968-78 deaths according to ICDA-8, and 1979-82 deaths according to ICD-9. Although there is little difference between ICDA-6 and ICDA-7, significant changes were made in ICDA-8 and ICD-9. Therefore, code numbers for ICDA-7, ICDA-8 and ICD-9 are given in addition to comparability ratios which have been applied to earlier rates to make them comparable to the 1979-82 rates. (Ratios from "Monthly Vital Statistics Report", Volume 17, #8 Supplement, October 25, 1968, and Volume 28, #11 Supplement, February 29, 1980; DHEW, NCHS, Washington, D.C.).

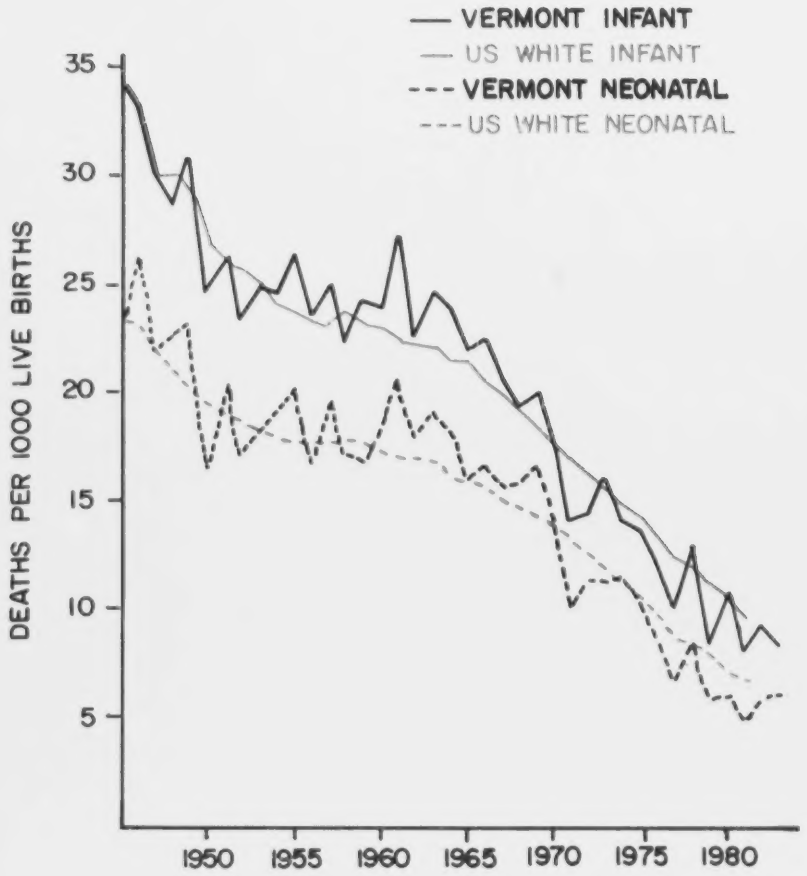
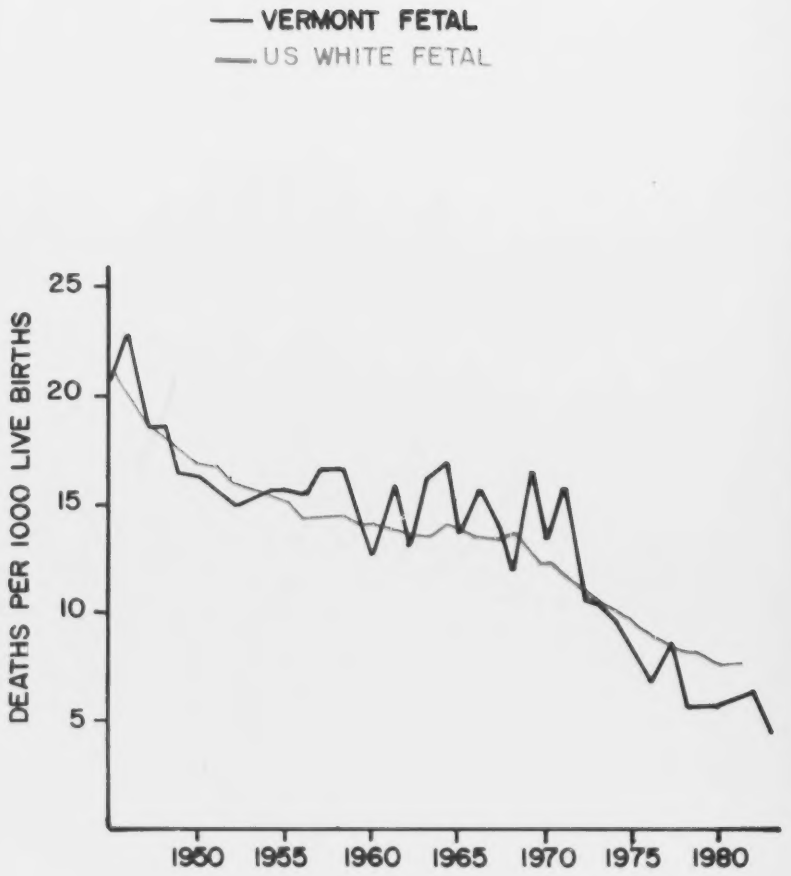
INFANT DEATHS, FETAL DEATHS, ABORTIONS

Figure 9

VERMONT AND U.S. WHITE INFANT AND NEONATAL MORTALITY RATES AND FETAL MORTALITY RATIOS 1945-1983





U.S. DATA FOR 1982 AND 1983 WERE UNAVAILABLE AT TIME OF PUBLICATION.

INFANT DEATHS, FETAL DEATHS, AND ABORTIONS

The 37 fetal deaths occurring to Vermont residents represents a decline from previous years. The corresponding rate of 4.6 per 1000 live births plus fetal deaths is the lowest ever recorded in the state. Fetal deaths have been declining steadily since the early 1970's.

The infant mortality rate of 8.7 per 1000 live births represents a small decline from the 1982 rate of 9.3. Not surprisingly, infant deaths are negatively associated with two factors, weeks of gestation and birthweight. Sixty four percent of babies weighing less than 1000 grams (2.2 pounds) at birth die within the first year of life, while only 19 percent of those weighing between 1000 and 1499 grams and 2 percent of those weighing between 1500 and 2499 grams fail to survive to their first birthday. Similarly, 68 percent of babies born before 28 weeks of gestation die while 99 percent of those born at 40-41 weeks survive.

There were 3355 abortions performed in Vermont in 1983, a decrease of 143 since 1982. This is the first decline in the number of abortions performed since 1977 and the smallest number of procedures since 1980. In addition, the number of abortions performed on Vermont residents (2433) is lower than in previous years, down from 2589 in 1982. This is the first drop in resident abortions since 1977. As in previous years, over half of abortion recipients were between the ages of 18 and 24, most (72 percent) were single, and had no children (74 percent). Almost all (93 percent) of these procedures were performed in the first trimester of pregnancy. Seventy percent were done in clinics, with an additional 29 percent being performed in physicians offices.

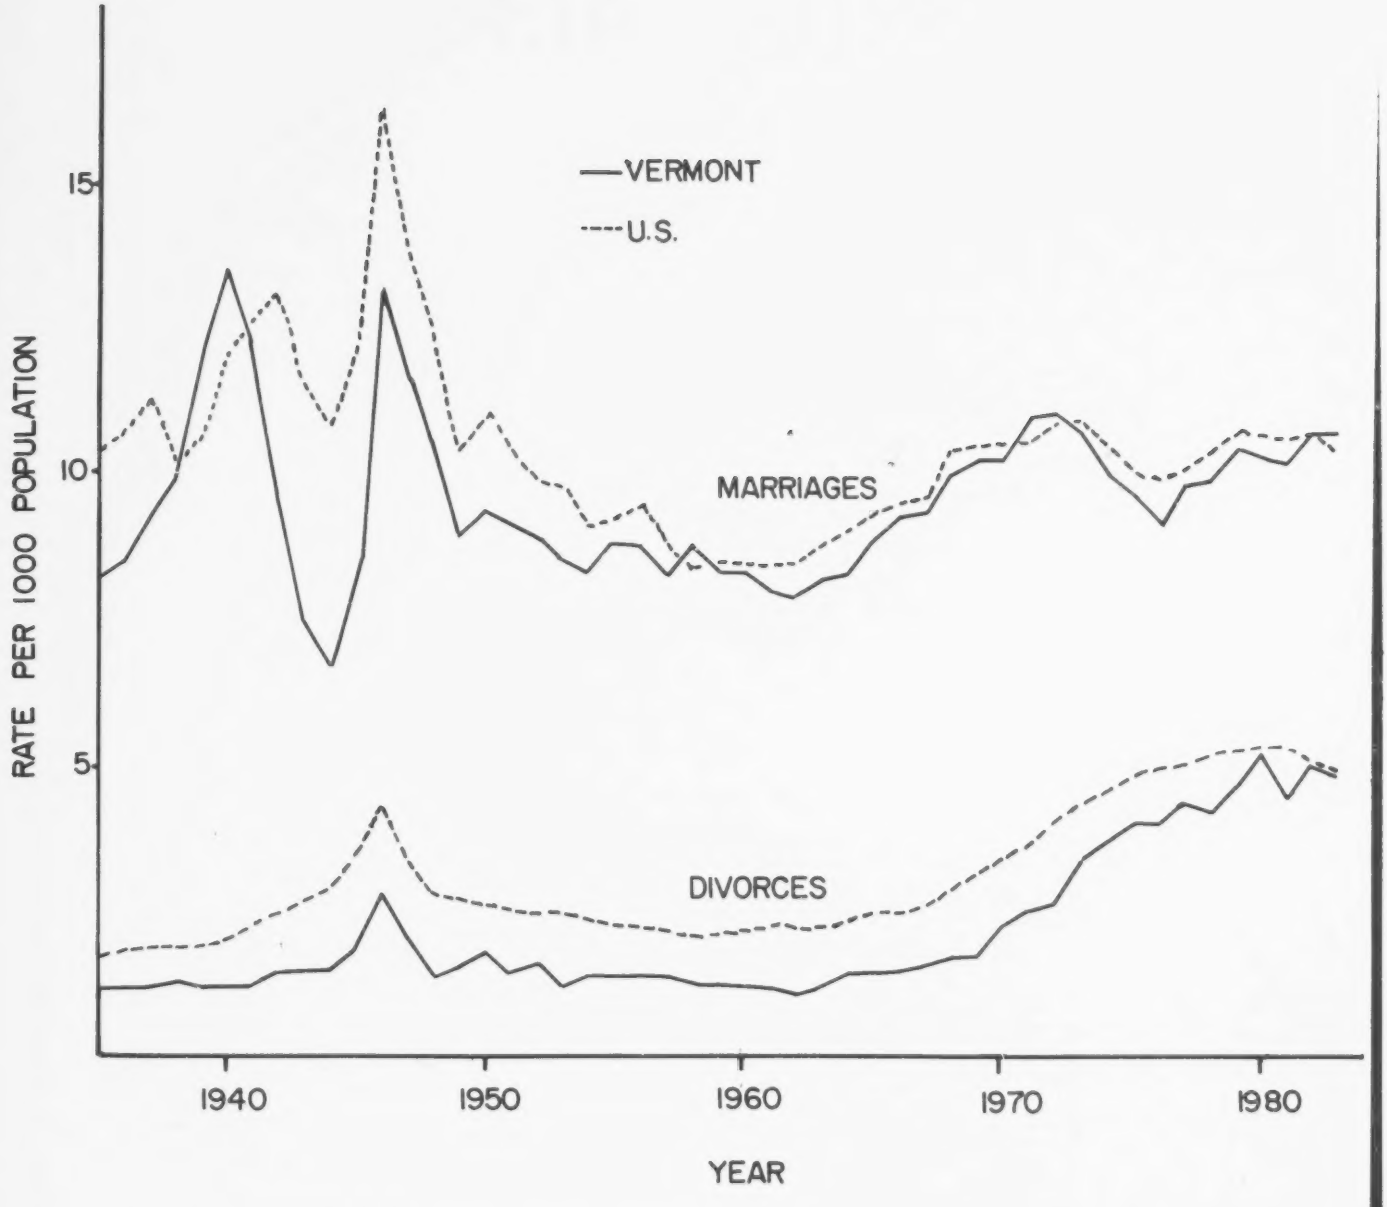
MARRIAGES AND DIVORCES

Figure II

MARRIAGE AND DIVORCE RATES VERMONT AND U.S. 1935 - 1983



1982 AND 1983 U.S. DATA ARE PROVISIONAL

MARRIAGES AND DIVORCES

Although the marriage rate of 10.7 marriages per 1000 population is the same as the 1982 rate, the 5600 marriages in 1983 is the largest number ever recorded in the state. In over 15 percent of these marriages neither the bride nor the groom were Vermont residents. Most of these couples were from New York, Massachusetts, New Hampshire, or Canada.

The age of brides ranged from 15 to 85 years, similar to that of grooms, 16 to 81. The median age at marriage was 25 for brides 2 years younger than for grooms, at 27 years. Fifty four percent of marriages were first marriages for both parties; 67 percent of brides and 65 percent of grooms married for the first time in 1983.

As in past years, summer was the most popular wedding time. Forty percent of all marriages occurred in June, July, or August. In contrast, the winter months were the least popular time, with only 12 percent of marriages occurring in the period January through March.

The 2575 divorces granted in 1983 yielded a rate of 4.9 divorces per 1000 population, comparable to that of recent years. A third of all divorces ended marriages of 5 or fewer years duration, while 7 percent ended marriages of greater than 25 years duration. Two thirds of all divorces terminated a marriage that was the first marriage for both parties. Approximately two thirds of divorces involved minor children.

The median age of wives at time of divorce was 32 years, compared to 35 years for husbands. The median age at time of marriage for persons divorcing in 1983 was 21 years for wives and 23 years for husbands.

DEFINITIONS OF THE 72 SELECTED CAUSES OF DEATH

Causes of Death	Category Numbers According to the International Classification of Diseases	
	Ninth Revision	Eighth Revision Adapted
Shigellosis and amebiasis	004, 006	004, 006
Certain other intestinal infections	007-009	008, 009
Tuberculosis	010-018	010-019
Tuberculosis of respiratory system	010-012	010-012
Other tuberculosis	013-018	013-019
Whooping Cough	033	033
Streptococcal sore throat, scarlatina and erysipelas	034-035	034
Meningococcal infection	036	036
Septicemia	038	038
Acute poliomyelitis	045	040-043
Measles	055	055
Viral hepatitis	070	070
Syphilis	090-097	090-097
All other infectious and parasitic diseases	001-003, 005, 020-032, 037, 039-041, 046-054, 056-066, 071-088, 098-139	Remainder of 000-136
Malignant neoplasms, including neoplasms of lymphatic and hematopoietic tissues	140-208	140-209
...of lip, oral cavity, and pharynx	140-149	140-149
...of digestive organs and peritoneum	150-159	150-159
...of respiratory and intrathoracic organs	160-165	160-163
...of breast	174-175	174
...of genital organs	179-187	180-187
...of urinary organs	188-189	188, 189
...of all other and unspecified sites	170-173, 190-199	170-173, 190-199
Leukemia	204-208	204-207
Other malignant neoplasms of lymphatic and hematopoietic tissues	200-203	200-203, 208, 209
Benign neoplasms, carcinoma in situ, and neoplasms of uncertain behavior and of unspecified nature	210-239	210-239

APPENDIX B

DEFINITIONS OF THE 72 SELECTED CAUSES OF DEATH

Causes of Death	Category Numbers According to the International Classification of Diseases	
	Ninth Revision	Eighth Revision Adapted
Diabetes mellitus	250	250
Nutritional deficiencies	260-269	260-269
Anemias	280-285	280-285
Meningitis	320-322	320
Major cardiovascular diseases	390-448	390-448
Diseases of heart	390-398, 402, 404-429	390-398, 402, 404, 410-429
Rheumatic fever & rheumatic heart disease	390-398	390-398
Hypertensive heart disease	402	402
Hypertensive heart and renal disease	404	404
Ischemic heart disease	410-414	410-413
Acute myocardial infarction	410	410
Other acute & subacute forms of ischemic heart disease	411	411
Angina pectoris	413	413
Old myocardial infarction & other forms of chronic ischemic heart disease	412, 414	412
Other diseases of endocardium	424	424, 428
All other forms of heart disease	415-423, 425-429	420-423, 425-427, 429
Hypertension with or without renal disease	401, 403	400, 401, 403
Cerebrovascular diseases	430-438	430-438
Intracerebral & other intracranial hemorrhage	431-432	431
Cerebral thrombosis and unspecified occlusion of cerebral arteries	434.0, 434.9	433
Cerebral embolism	434.1	434
All other and late effects of cerebrovascular disease	430, 433, 435-438	430, 432, 435-438
Atherosclerosis	440	440
Other diseases of arteries, arterioles and capillaries	441-448	441-448

APPENDIX B

DEFINITIONS OF THE 72 SELECTED CAUSES OF DEATH

Causes of Death	Category Numbers According to the International Classification of Diseases	
	Ninth Revision	Eighth Revision Adapted
Acute bronchitis and bronchiolitis	466	466
Pneumonia and Influenza	480-487	470-474, 480-486
Pneumonia	480-486	480-486
Influenza	487	470-474
Chronic obstructive pulmonary diseases (C.O.P.D.) & allied conditions	490-496	490-493, 519.3
Bronchitis, chronic and unspecified	490-491	490-491
Emphysema	492	492
Asthma	493	493
Other C.O.P.D. and allied conditions	494-496	519.3
Ulcer of stomach and duodenum	531-533	531-533
Appendicitis	540-543	540-543
Hernia of abdominal cavity and intestinal obstruction without mention of hernia	550-553, 560	550-553, 560
Chronic liver disease and cirrhosis	571	571
Cholelithiasis & other disorders of gallbladder	574-575	574, 575
Nephritis, nephrotic syndrome, and nephrosis	580-589	580-584
Acute glomerulonephritis & nephrotic syndrome	580-581	580, 581
Chronic glomerulonephritis, nephritis & nephropathy, not specified as acute or chronic and renal sclerosis, unspecified	582-583, 587	582-584
Renal failure, disorders resulting from impaired renal function, & small kidney of unknown cause	584-586, 588-589	582-584
Infections of kidney	590	590
Hyperplasia of prostate	600	600
Complications of pregnancy, childbirth and the puerperium	630-676	630-678
Pregnancy with abortive outcome	630-638	640-645
Other complications	640-676	630-639, 650-678

APPENDIX B

DEFINITIONS OF THE 72 SELECTED CAUSES OF DEATH

Causes of Death	Category Numbers According to the International Classification of Diseases	
	Ninth Revision	Eighth Revision Adapted
Congenital Anomalies	740-759	740-759
Certain conditions originating in perinatal period	760-779	760-769.2, 769.4-772, 774-778
Birth trauma, intrauterine hypoxia, birth asphyxia, and respiratory distress syndrome	767-769	764-768. 772, 776
